

## **CS385FZ Mobile Application Development**

### **Lab 5 Final Team Project**

#### **Your Tasks:**

##### **1. Create a Git Repository**

Set up a Git repository for your project. Make sure the repository is properly initialized, includes an appropriate `.gitignore` file, and is shared with all team members.

##### **2. Describe Project Requirements and Technologies**

Write a brief document outlining the functional and non-functional requirements of the project. Additionally, specify the technologies you plan to use to implement the project.

##### **3. Define Team Member Responsibilities**

Clearly divide the work among all group members. For each member, describe their primary responsibilities, such as frontend development, backend development, UI/UX design, testing, documentation, or project coordination.

##### **4. Create an Implementation Plan**

Develop a timeline or step-by-step plan for completing the project. Include major milestones, expected deliverables, deadlines, and any dependencies between tasks.

#### **Lab Report Submission:**

- Submit a PDF report that clearly presents what you have done in the lab.
